

GRAIN CORN

Hamilton-Wentworth – Sept 1, 2016

Producer has been using Penergetic on his crops for past three (3) years.

Picture above is of his 2016 corn crop (also grows soybeans using Penergetic). In spite of generally dry hot growing conditions this year, he has observed that his crops are performing remarkably well – and noticeably better than comparable crops in the surrounding area (which are showing signs of stress).

PROTOCOL: Grower Standard Practice (GSP) + 200 grams/acre penergetic k (Soil Activator) + 100 grams/acre penergetic p (foliar applied).
