

## Lagoon Treatment with Penergetic g(k) Bow Area, Skagit County, WA

← Prior to treatment,  
heavy crust on lagoon surface

Eleven (11) days after treatment:  
lagoon's liquid manure bubbling,  
previous crust submerged and  
already partially dissolved.  
[No mechanical agitation involved.]

December 23, 2013

300 cow free stall dairy

Protocol Used:

- 72 lbs. of Penergetic g(k) added to lagoon  
400,000 gallon (as shock treatment)
- 6.5 lbs. per week for 12 weeks
- then 3.25 lbs. per week  
(= regular/maintenance application rate)
