

With the impulse of nature.

For intelligent agriculture

Company

Our vision. Our drive.

Our vision is one of a high-performing and efficient agriculture. An agriculture that preserves resources and makes optimal use of natural potential. An agriculture that already thinks about future generations today.

Successful agriculture. In harmony with nature.

The signs point to change. Rapidly growing global population increases the demand to produce more food in a more efficient and environmentally-friendly manner.

For more than twenty years, we have been focused on making a positive contribution to address the future challenges for humans, animals and the environment. That is why we have developed a technology that allows for the efficient and optimal use of natural resources - the PENERGETIC technology.

Our technology is used in different areas:

Agriculture - PENERGETIC

Biotechnology for sustainable and efficient agriculture

Water vitalization - AquaKat

Structured and vitalized water for humans, animals and plants

Unique quality. Made in Switzerland.

Our facility in Switzerland provides the perfect environment to realize our vision. A qualified team, innovative product development and modern production facilities meet the highest standards. Together with our partners all over the world, we constantly work on our products for existing and new agricultural sectors.

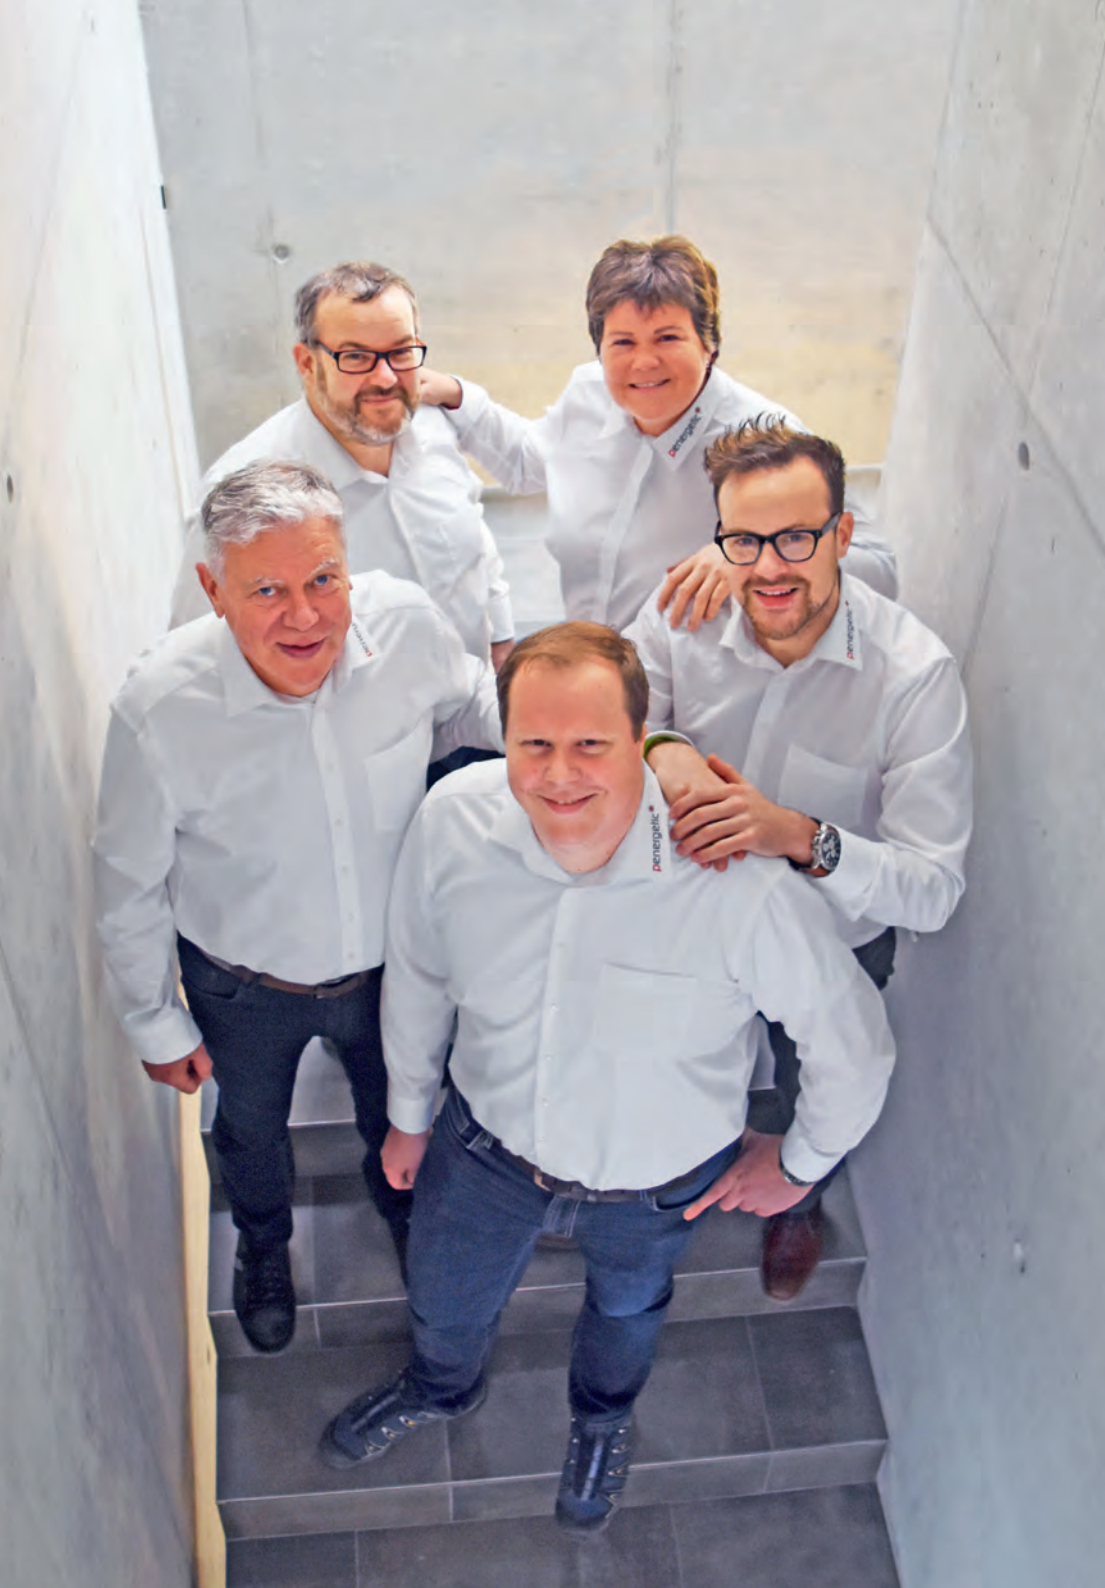

Only the best. Nothing else.

All our products are made in Switzerland. We guarantee high quality and readiness to deliver.

* Approved for organic farming in Switzerland in accordance with FiBL's list of operating resources

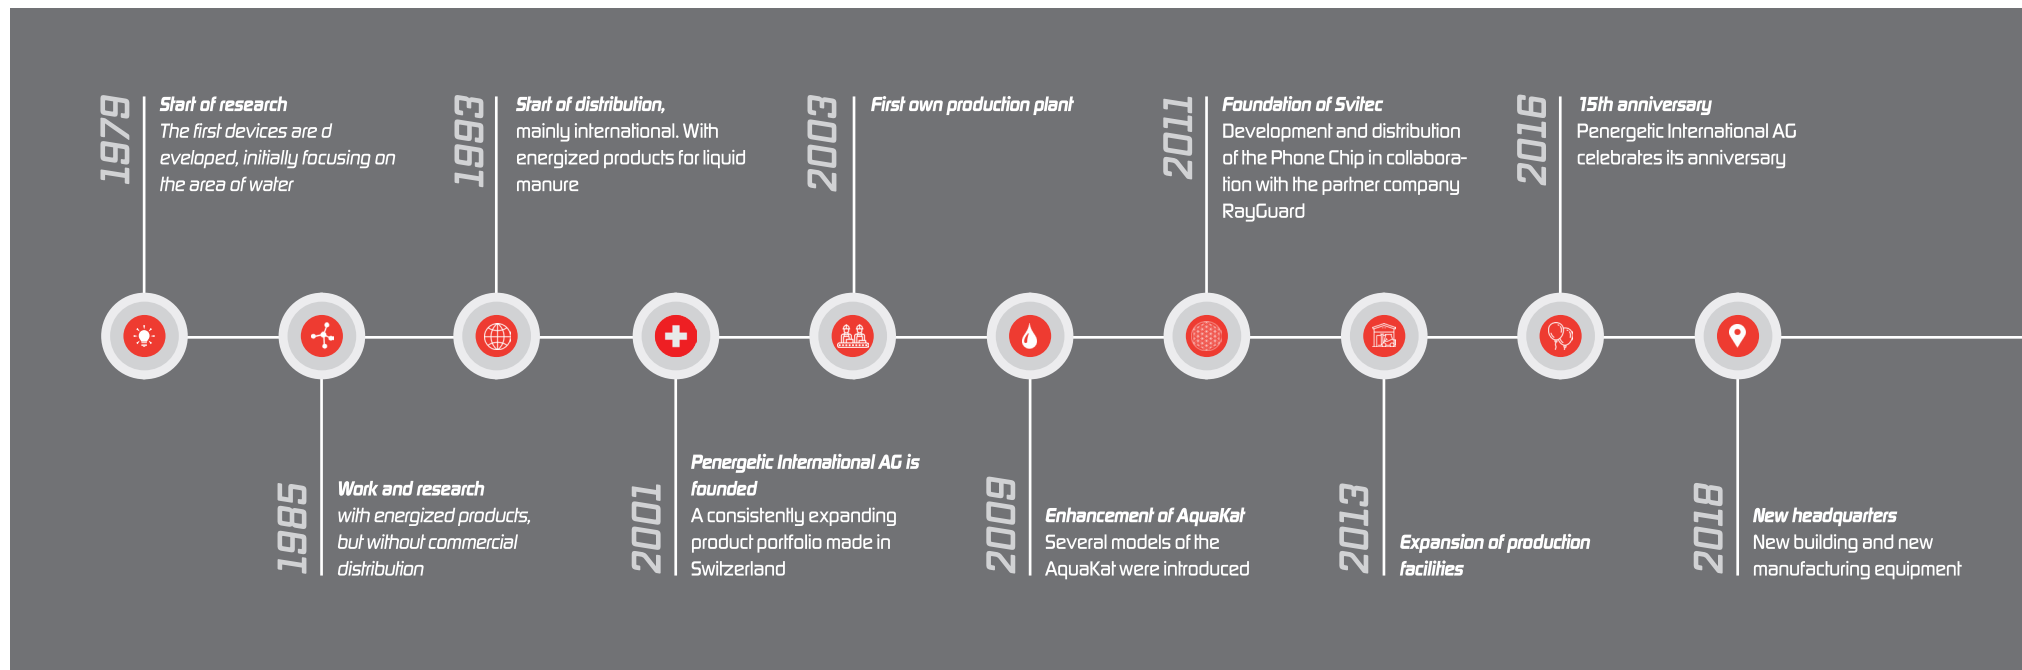

A passion for nature. A mission.

Penergetic International AG is a family-owned company. We have developed a technology that enables us to transfer selected active frequencies and characteristics to other carrier materials. Our product system is used successfully worldwide in a wide range of agricultural sectors.

Our approach is based on values: respectful interaction with humans and nature, fairness and social relationships.

Now already in the second generation, we are committed to this on and on-going basis.

Milestones. Our history.

$$\sum_{i=1}^m W_P^{IC} = f(W_P^{OS}, E, H_{1,2}, \emptyset_{1,2}, t_E, t_{H_{1,2}}, OS_{A,d}^n, OS^{nIC^0}, \int_{H_{1,2}}, \int_{H_{1,2}}^{Profil})$$

The technology. Origins and development.

The PENERGETIC technology is based on physical principles. All of life, including growth, actions and thoughts are not possible without electrical impulses and magnetic waves.

The Realization that every atom, molecule, compound and substance has its own electro-magnetic frequency led to the development of the PENERGETIC technology.

We have been able to transmit selected frequencies to suitable material under controlled conditions of electromagnetic induction. This leads to a modified electron status of the material, which was treated with the PENERGETIC technology.

The penergetic products emit the selected electro-magnetic frequencies to the area of application and generate the desired effect.

Electrical impulses and magnetic waves make life possible

Utilizing the potential in agriculture: principles that have been successfully used in the treatment of humans for decades can now also be utilized in agriculture with penergetic products.

Application of frequencies. And properties.

In agriculture, desired improvements such as better growth or resistance, can be stimulated with penergetic products. This biostimulation strengthens the whole organism and leads to an optimal use of the available resources and to an increase in quantity and quality of the products.

Programming selected properties

The programming is not limited to single frequencies or characteristics. Several frequencies can be combined simultaneously on one product. Thanks to many years of experience, a selection of frequencies in combination with one another can be chosen today, which have already proven to be effective, to achieve more optimal results.

Individual solutions

Together with the international network of Penergetic partners, individual products and solutions have been developed for customers.

« The application of penergetic products showed interesting trends in the development of plants. This should be further reviewed for a new approach in agriculture »

Prof. Dr. Maria R. Finckh (Ecological plant protection, University Kassel)

Natural strenghtening. Instead of fighting symptoms.

Our products support and strengthen the various agricultural sectors in a comprehensive and natural way.

Importantly, penergetic products confront the root cause of problems, instead of simply adressing symptoms. Penergetic - induced biostimulation allows for the best possible use of available resources.

This sustainable treatment results in better growth, increased yield and healthier and more vibrant crops and animals.

The penergetic product system opens new possibilities and opportunities for successful agriculture.

Worldwide partners. Our vision is expanding.

Today, partners all over the world support our vision.

The international network enables us to provide you with excellent support and advice wherever you are.

« The trust of our partners enables the success of penergetic products. »

Robert Wilhelm (Executive Director)
